

INTRODUCING

RAZ PRx PRESSURE REDUCTION SEATS

When comfort, access and adjustability are important, RAZ has the solution...

For the user with more complex seating requirements the **PRx seat** is a new addition to the seating line up replacing the Visco elastic interface seat. **The PRx seat** is made with a high density foam base foundation, designed to provide superior stability and contours, while the surface layer of self-skinning gel foam provides a soft interface against the body.

The **PRx seat** is available in ten configurations including left, right and rear cut outs for improved access or full seat models for comfort and pressure reduction. All **RAZ** seats have 2" of fore/aft seat adjustment and can have optional spacers for seat angle adjustment. All in 16" or 19" depths and 18" widths, the **PRx seats** are designed to fit the AP, SP and the AT models.

For the right FIT, the right CONTOUR, the right FUNCTION, Choose RAZ.
